

# Cloverdale, I-84 Overpass

## REPAIR SCHEDULE: May 30-Early July

The Cloverdale Road, Interstate 84 Overpass was damaged in July 2006 when it was struck by an over-height vehicle traveling eastbound on the interstate. The project will remove and replace two bridge girders that were severely damaged in the collision.

- Beginning Wednesday (May 30) at 9 a.m. the bridge will close to all vehicles, including pedestrians and bicycles, for repairs.
- The bridge is expected to reopen with project completion in early July 2007.
- During construction, Cloverdale traffic will be detoured to Eagle Road via Franklin and Overland roads.
- Cloverdale between Overland Road and I-84, and between Franklin Road and I-84, will be open to local traffic only.
- Eastbound I-84 will be closed to all nighttime traffic between the Eagle Road Interchange and I-184 (the Connector) on June 1 and 2 from midnight to 5 a.m. Signage will direct traffic around the project area, using Franklin Road as a detour route.

Through the work zone, eastbound I-84 traffic can expect a reduced speed limit of 55 mph, closed shoulders and periodic nighttime lane reductions. The inside westbound shoulder will also be closed, though no speed reduction or lane closures will occur on the westbound interstate.

Motorists are asked to use extreme caution when traveling through work zones. Rear-end collisions account for most work zone crashes. Following too closely, inattentive driving, failing to yield the right of way and improper lane changes also contribute to accidents in work zones.
